Laundry	✓	✓	✓	✓		
LARGE ROOMS						
Bathroom/Ensuite	✓	✓	✓	✓		
Kitchen					✓	

Please Note: **Early morning natural light may be an issue in bedrooms - therefore a daylight dimmer may be required. There are restrictions on Solatube Daylighting System's performance, mainly affected by the distance between ceiling and roof. Longer lengths, shadowy areas, or in extraordinary situations, e.g. very dark décor, a larger size Solatube Daylighting System may be required outside the above charts' recommendations. Hallways, high stud, dark décor, wooden floors - need to upgrade to the large 290DS model. In some situations for a balanced air situation, e.g. in a bathroom or sloping ceiling, a Solatube 160DS Daylighting System with a separate mechanical ventilation (VS3004) is recommended. ***Always consult your Solatube professional for advice.***
